

Inventory Reconciliation

International Rental Corp · San Juan Airport | Generated 2026-05-27

The situation

System reports 46 currently active reservations against your physical count of 49 contracts in store. Beyond that gap, the database is holding 39 reservations that are 1-14 days past their planned return and 60 more that are 14+ days stale (likely returned but never closed in the system). Several vehicles appear assigned to two or three reservations at once, and one row is marked CHECKED_OUT in the year 2027.

This document is the working plan for the lot walk-through tomorrow. Each section is meant to be checked off as you go.

Current state snapshot

Bucket	Definition	Reservations	Unique vehicles
A. Active (within window)	CHECKED_OUT, returnAt > now	46	45
B. Recently overdue (1-14d)	CHECKED_OUT, returnAt 1-14d past	39	31
C. Stale (>14d overdue)	CHECKED_OUT, returnAt 14d+ past	60	49
	Total reservations system thinks are out	145	
	Your physical store count	49	
	Reconciliation target	■ 96 phantoms ■	

Of the 46 active reservations only 1 is recorded as extended in the system (William Estrella, RES-145394, +16 days). The other ~3 contracts you have in hand are almost certainly customers you extended verbally but never recorded — they're sitting in Bucket B right now and will snap back into Bucket A as soon as you extend them in the wizard.

Critical anomalies — fix first

1. Reservation in the year 2027

RES-077038 — roberto jimenez, KJF-928 Toyota Highlander. Pickup date is recorded as 2027-04-16, return 2027-05-16, but the reservation is marked CHECKED_OUT. Either a year typo on creation or a parser edge case. Either way, this row is currently propping up the active count by 1 with bogus data and is also double-booking KJF-928 with RES-783356 (Rafael Gonzalez, the real current rental).

Action: Either correct the dates if you find paperwork showing the intended year (2026), or flip the reservation to CHECKED_IN / CANCELLED if the customer already returned / never picked up.

2. Reservation with no vehicle assigned

RES-850921 — Maria Estela Rosa, vehicle field is NULL, planned return was 2026-05-24 (3 days ago). Marked CHECKED_OUT but the system has no idea which car she has. Will need a manual check against your paper contract to figure out the vehicle and assign it back — or, if Maria never picked up, mark as NO_SHOW.

3. Vehicle double-bookings (9 plates)

Same plate appears on multiple active or recently-overdue reservations. A car can't be in two places, so for each plate exactly one reservation is the live rental and the others are stale. Resolving these 9 plates alone removes 9 phantoms from the count and frees vehicles that the system currently thinks are stuck out.

Plate	Vehicle	Reservation	Customer	Status
KST896	Mitsubishi Mirage	RES-988644	Hugo Sponton	bucket B - 1d overdue
		RES-127201	Carlos Elvira	bucket B - 4d overdue
		RES-896241	Devin Martinez	bucket B - 8d overdue
KFW-858	Ford Transit Connect	RES-678926	Brian Padilla	bucket A - active
		RES-904623	Nicholas Geever	bucket B - 6d overdue
		RES-275572	Edwin Otero	bucket B - 11d overdue
KST893	Mitsubishi Mirage	RES-020192	Mohammed Hussein	bucket A - active
		RES-449555	Crystal Diaz	bucket B - 2d overdue
		RES-455229	Luis Alicea	bucket B - 8d overdue
KFW-860	Ford Transit Connect	RES-426653	Shion Michael	bucket B - 3d overdue
		RES-759253	Carlos Cid	bucket B - 6d overdue
KMR719	Dodge Durango	RES-867597	Fajr Ahmad	bucket A - active
		RES-675234	Ngai Jones	bucket B - 13d overdue
KHW-843	Hyundai Palisade	RES-830429	Virginia Solano	bucket B - 2d overdue
		RES-731925	Yadiel Cruz	bucket B - 5d overdue
1183910	Ford F-150	RES-854420	Marangenid Ortiz	bucket B - 2d overdue
		RES-508521	Ventura Vivoni	bucket B - 3d overdue
KHC511	Nissan Versa	RES-538241	Rebecca Mercado	bucket A - active
		RES-293548	Julian Rios	bucket B - 7d overdue

Plate	Vehicle	Reservation	Customer	Status
KJF-928	Toyota Highlander	RES-783356	Rafael Gonzalez	bucket A - active
		RES-077038	Roberto Jimenez	bucket A - BAD DATA (2027 dates)

Heuristic: the older/longer-overdue row on each plate is usually the stale one — the vehicle came back but was never closed in the system. Mark those CHECKED_IN if paid in full or CHECKED_IN_UNPAID if money is still owed.

Recommended workflow

Four passes through the data, narrowest to broadest. Each pass leaves fewer rows for the next.

Pass 1 — Resolve the 9 vehicle conflicts

For each plate in the conflict table, identify which reservation is the real current rental and which are stale. The Active-bucket row is almost always the live one. Close the others via /reservations?filter=overdue using Mark returned or Full checkin. Estimated time: ~15 minutes, removes ~12-15 phantoms.

Pass 2 — Find the verbal extensions (3 of 39)

Walk Bucket B against your 49 paper contracts. Three customers should still be in your hand — those are the ones you verbally extended. Extend them in the system via the reservation page; the wizard now correctly updates both reservation.returnAt and agreement.returnAt (today's fix). They'll automatically move from Bucket B to Bucket A and bring your active count to 49.

Pass 3 — RES-850921 (no vehicle)

Manual check — assign the correct vehicle from paperwork, then mark appropriate status. Or NO_SHOW if Maria never picked up.

Pass 4 — Close out the rest of Bucket B + Bucket C

Remaining ~33 in Bucket B plus 60 in Bucket C are the bulk cleanup. Vehicles returned long ago, never closed. Per-row triage via the UI: Mark returned (CHECKED_IN_UNPAID if balance pending, CHECKED_IN if paid) or NO_SHOW for the few NEW/CONFIRMED rows. Pace it across a few sessions — the per-row buttons make this quick.

End state: 49 active reservations matching your 49 paper contracts. Available vehicles count aligns with what's physically in the lot. From this baseline, future overdues get triaged within their natural cycle and stale data never accumulates again.

Bucket A — 46 active reservations

All CHECKED_OUT with returnAt > now. Sorted by due-back ascending. Flag column highlights known issues (plate conflict / bad data / extension recorded / long-term).

SQL appendix — handy queries

If you need to re-run the diagnostics during the walk-through, paste these into Supabase. Tenant id is inlined for International Rental Corp.

Active reservations (Bucket A — should land at 49 after cleanup)

```
SELECT r."reservationNumber", c."firstName" || ' ' || c."lastName" AS customer,
       v.plate, r."pickupAt"::date AS picked_up, r."returnAt" AS due_back
FROM "Reservation" r
LEFT JOIN "Customer" c ON c.id = r."customerId"
LEFT JOIN "Vehicle" v ON v.id = r."vehicleId"
WHERE r."tenantId" = 'cmn98hc1u0085ke0i4vefujt3'
      AND r.status = 'CHECKED_OUT'
      AND r."returnAt" > NOW()
ORDER BY r."returnAt" ASC;
```

Recently overdue (Bucket B)

```
SELECT r."reservationNumber", c."firstName" || ' ' || c."lastName" AS customer,
       v.plate, r."returnAt" AS planned_return,
       EXTRACT(DAY FROM (NOW() - r."returnAt"))::int AS days_overdue
FROM "Reservation" r
LEFT JOIN "Customer" c ON c.id = r."customerId"
LEFT JOIN "Vehicle" v ON v.id = r."vehicleId"
WHERE r."tenantId" = 'cmn98hc1u0085ke0i4vefujt3'
      AND r.status = 'CHECKED_OUT'
      AND r."returnAt" <= NOW()
      AND r."returnAt" > NOW() - INTERVAL '14 days'
ORDER BY r."returnAt" DESC;
```

Stale (Bucket C — bulk close-out target)

```
SELECT r."reservationNumber", c."firstName" || ' ' || c."lastName" AS customer,
       v.plate, r."returnAt" AS planned_return,
       EXTRACT(DAY FROM (NOW() - r."returnAt"))::int AS days_overdue
FROM "Reservation" r
LEFT JOIN "Customer" c ON c.id = r."customerId"
LEFT JOIN "Vehicle" v ON v.id = r."vehicleId"
WHERE r."tenantId" = 'cmn98hc1u0085ke0i4vefujt3'
      AND r.status = 'CHECKED_OUT'
      AND r."returnAt" <= NOW() - INTERVAL '14 days'
ORDER BY r."returnAt" ASC;
```

Sanity check after the walk-through

Run this at the end of the session — should ideally show active=49, recently_overdue=0, stale=0:

```
SELECT
  COUNT(*) FILTER (WHERE r."returnAt" > NOW()) AS active,
  COUNT(*) FILTER (WHERE r."returnAt" <= NOW()
    AND r."returnAt" > NOW() - INTERVAL '14 days') AS recently_overdue,
  COUNT(*) FILTER (WHERE r."returnAt" <= NOW() - INTERVAL '14 days') AS stale
FROM "Reservation" r
WHERE r."tenantId" = 'cmn98hc1u0085ke0i4vefujt3'
      AND r.status = 'CHECKED_OUT';
```
